

Can You Help Me Please?

You are at an event helping in uniform. Someone comes up to you and asks directions for the following services:

1. Hospital
2. Urgent Care Center
3. Drug Store/Pharmacy
4. Grocery Store
5. Police Department
6. Fire Department
7. Auto Repair Shop
8. Hotel/Motel
9. Restaurant
10. Pet Store

Can you describe or draw a map to each of these services within a 2 mile radius of your home, your work place, city hall in your city and a place where you enjoy spending time? You must use terms they will understand such as number of blocks, number of traffic lights, left or right turns or compass directions such as, "go north on this street." You could also use landmarks that are easily seen such as "the barber shop on the corner."

Could you describe or draw a map to these locations at the event where you are working in our area of response without using electronic devices such as cell phones, tablets or GPS units? If handed a map of the area could you find these services?

Example: Here is a map of John Sanders' home in Lakewood with a 2 mile radius square drawn on the map. Various symbols on the map indicate the services described above. These are not all the services available but examples.
